

CLASSROOM DEVICE PROCEDURES & SCRIPTS

Carrying · Storage · Entry Check · Exit Check · Line-Up — every cue names its voice level from the schoolwide 0–4 scale.

THE VOICE-LEVEL SCALE — SAME NUMBERS, SAME MEANINGS, EVERY ROOM

0
SILENT

No talking at all.

1
WHISPER

Partner only.
Hallways.

2
CONVERSATIONAL

Heard by your group only.

3
PRESENTATION

Heard by the whole room.

4
OUTSIDE VOICE

Never indoors.

HOW THE ALIGNMENT WORKS — every device cue below names a voice level, paired with the same hand signal (fingers up for the number) used everywhere else in the building. Device routines in motion — hallways and transitions — run at **Level 1 (whisper)** per the schoolwide scale; checkpoints where students listen for a release run at **Level 0**. One scale, one signal, no guessing.

1 CARRYING DEVICES CLASS TO CLASS

VOICE LEVEL 1

The Standard. Device closed, held flat with two hands against the chest — like carrying a book, not swinging it by a corner. Walking pace only; the device stays with its assigned student for the whole passing period, never set down and never handed to a classmate. Voices at **Level 1 (whisper)** the entire way — the hallway level from the scale.

EXAMPLE

Two hands, flat against chest, screen closed, walking pace, Level 1 (whisper) voice.

NON-EXAMPLE

One hand, swinging at the side, open, calling across the hallway at Level 3.

SAY IT LIKE THIS

Before dismissing: “Devices up, two hands, closed. Level 1 in the hallway. Show me.”

Correcting: “Stop. Two hands, against your chest — and check your voice. That’s not a Level 1. Try that again.”

DAY ONE	TEACHER DOES / SAYS	STUDENTS DO
I DO	Model the carry while narrating: “Two hands, closed, against my chest, walking, Level 1 (whisper) voice.” Then model the non-example and ask what’s wrong.	Watch both models silently (Level 0).
WE DO	Cue “Devices up” + the hand signal for the level; walk a practice lap together.	Walk the lap carrying correctly at the named level.
YOU DO	Dismiss to a real transition using only the cue and the fingers-up signal. Scan and correct in real time.	Carry correctly at level, unprompted, every future transition.

2 STORAGE IN THE CLASSROOM

VOICE LEVEL 0 • SILENT

The Standard. Cart rooms: device back in its assigned, labeled slot — charging, closed, right side up. Desk rooms: closed and flat on one side of the desk, never the floor or a backpack. Rolling desks: in the side basket while moving. The storage cue runs at **Level 0** — hands moving, mouths silent, so the slot check is fast and every gap is heard about immediately after.

EXAMPLE

Closed and flat on the desk edge or in its labeled slot; room at Level 0 during the check.

NON-EXAMPLE

Open and unattended, on the floor, or a slot check shouted over a Level 3 room.

SAY IT LIKE THIS

Transition to discussion: “Level 0 — devices closed, flat, on the corner of your desk. Then eyes on me.”

End of period: “Slot check, Level 0 — devices back in your numbered slot before you line up.”

DAY ONE	TEACHER DOES / SAYS	STUDENTS DO
I DO	Show the correct storage spot for this room (slot, desk corner, basket). Name where it lives — and that the cue means Level 0.	Watch; locate their own assigned spot.
WE DO	Cue “Level 0 — devices closed and stored” with zero fingers up; walk the room checking each spot together.	Store the device silently; wait for a thumbs-up check.
YOU DO	Use the cue during a real activity transition without walking the room.	Store correctly, silently, without being individually checked.

3 ENTRY CHECK — EVERY STUDENT HAS A DEVICE

VOICE LEVEL 1 • WHISPER

The Standard. Within the first two minutes, the teacher confirms every present student has their own assigned device — during attendance, not as a separate task. Devices out and open on desks (or visibly in slots). The room holds **Level 1** — the independent-work level — while the entry task starts and the scan runs; a device gap is flagged on the spot, not discovered mid-lesson.

EXAMPLE
Scan happens during attendance in a Level 1 room; gaps caught in the first two minutes.

NON-EXAMPLE
Device gap discovered 20 minutes in, in a room too loud for anyone to have flagged it.

SAY IT LIKE THIS

Entry routine: “Devices out, open, screens down. Level 1 while I check rows.”

Flagging a gap: “I don’t see your device — missing, broken, or left somewhere? Talk to me after the bell, not during work time.”

DAY ONE	TEACHER DOES / SAYS	STUDENTS DO
I DO	Model the scan aloud while taking attendance: “Row one, row two...” pointing to each desk, in a Level 1 room.	Watch the scan pattern at Level 1.
WE DO	Cue students to hold devices up briefly so the scan is visible and fast — one finger up for the level.	Hold device up on cue; keep voices at Level 1.
YOU DO	Run the scan silently during attendance without narrating it.	Devices visibly out and ready, room at level, no reminder.

4

EXIT CHECK – BEFORE ANY STUDENT LEAVES

VOICE LEVEL 0 · SILENT

The Standard. No student leaves — for the next class, lunch, or dismissal — until the teacher visually confirms their device is stored or in hand correctly. “Devices up, lids down” — flat in front, chest height, closed, like a tray — at **Level 0**, because students are listening for their table’s release. A student without their device does not leave until it’s located: this is the last checkpoint before a Missing Device report.

EXAMPLE
Row-by-row release after a visible device check, in a silent room where the release can be heard.

NON-EXAMPLE
Whole class released at once, no check, over a Level 3 room — this is how devices get left behind.

SAY IT LIKE THIS

Before line-up: “Devices up, lids down, Level 0. Show me. Table one, you’re released.”

Catching a gap: “Hold on — where’s your device? We’re not lining up until we find it.”

DAY ONE	TEACHER DOES / SAYS	STUDENTS DO
I DO	Model the tray position — flat, closed, chest height — and explain it's the same position, at Level 0, for every dismissal all year.	Watch the model position.
WE DO	Cue “Devices up, lids down, Level 0” and check the whole room together before releasing anyone.	Hold the position silently; wait for their table's release.
YOU DO	Use the cue and release by table with only a glance-check.	Hit the position and the level immediately on the cue.

5 LINING UP WITH DEVICES

LEVEL 0 · FORM

LEVEL 1 · HALL

The Standard. Device flat, two hands, chest height — the exit-check position carried into the hallway. The line forms at **Level 0** (students are listening for the freeze-and-check), then holds **Level 1 (whisper)** in the hallway, per the schoolwide scale. Device never swings, never one-handed, never set down in the hallway — if a student needs both hands, the line stops.

EXAMPLE

Two hands, chest height, eyes forward, at the named level for line and hall.

NON-EXAMPLE

Device tucked under one arm while talking at Level 2–3 or shoving in line.

SAY IT LIKE THIS

Forming the line: “Line it up. Devices flat, two hands, chest height. Level 0.”

In the hallway: “Level 1 in the hallway. Freeze — I need to see every device up before we keep moving.”

DAY ONE	TEACHER DOES / SAYS	STUDENTS DO
I DO	Model the line-up position and a short practice loop, naming both levels: Level 0 to form, Level 1 (whisper) in the hall.	Watch the full model, including the freeze-and-check.
WE DO	Line the class up and walk a real hallway lap using the cue and hand signals.	Hold position and level for the full walk; respond to a practice “freeze.”
YOU DO	Use only “Line it up” for all future transitions.	Form the line, hold devices and levels correctly, no individual reminders.

ONE-PAGE CUE CARD – POST NEAR YOUR DOOR

CUE + HAND SIGNAL, EVERY TIME

ROUTINE	THE CUE	VOICE LEVEL
CARRYING	“Devices up, two hands, closed. Level 1 in the hallway.”	Level 1
STORAGE	“Level 0 — devices closed and stored.”	Level 0
ENTRY CHECK	“Devices out, open, screens down. Level 1 while I check rows.”	Level 1
EXIT CHECK	“Devices up, lids down, Level 0. Show me.”	Level 0
LINE-UP	“Line it up. Devices flat, two hands, chest height. Level 0.”	0 → 1 Hall
